                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The product of the Drosophila melanogaster hid gene is responsible for inducing apoptosis in embryos. Activation of the Ras/MAPK pathway is thought to inhibit Hid induced cell death. Mutant forms of the hid gene, hidAla3 and hidAla5 have been generated in which DNA encoding phosphoacceptor residues is replaced with DNA encoding non-phosphorylatable amino acids. These mutants are not suppressed by MAPK induced phosphorylation. Compositions from the mutant gene are useful in screening assays for ancagonists and agenists of Hid phosphorylation by mitogen activated protein kinase (MAPK). They may also be used to identify new constituents of the Hid signalling pathway. The new compositions may be useful, in identifying new incolous of Hid or its natural mutations. The present segmence is the wild type

                                                                                                                                                                                                                                                                                                                                     gene, hiddla3 and hiddla5 have been generated in which DNA encoding phosphoacceptor residues is replaced with DNA encoding non-phosphorylateble amino acids. These mutants are not suppressed by MAPK induced phosphorylation. Compositions from the mutant gene are useful in screening assays for antagonists and agonists of Hid phosphorylation by mitogen activated protein kinase (MAPK). They may also be used to identify new constituents of the Hid signalling pathway. The new compositions may be useful in identifying new month of Hid or its natural mutations. The present sequence is the cDNA of the hidala3 mutant.

                                                                                                                                                                                                                                                                                                                                                         The product of the Drosophila melanogaster hid gene is responsible for inducing apoptosis in embryos. Activation of the Ras/MAPK pathway is thought to inhibit Hid induced ceil death. Mutant forms of the hid gene, hidala3 and hidala5 have been generated in which DNA encoding phosphoacceptor residues is replaced with DNA encoding non-phosphorylatable amino acids. These mutants are not suppressed by KARK induced phosphorylation. Compositions from the mutant gene are useful in screening assays for aniagonists and agonists of Hid phosphorylation: by mitogen activated protein kinase (MAPK). They may also be used to identify new constituents of the Hid signailing pathway. The new compositions may be useful in identifying new homologs of Hid or its natural mutations. The present sequence is the CONA
                                                                                                                                                                                                                                           Composition, useful in screening assays for antagonists and agonists of Hid phosphorylation by mitogen activated protein kinase (MAPK), comprises DNA having an oligonucleotide sequence of mutant forms of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    380 GAAGGIGCIATCAATICGGAACAGGATATICCGAGCCAGTFGCTAAAAAIGCCCTTTCIC

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176 ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or nore genes from Drosophila and for elucidating cell signalling and cell-cell

Petermination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophina Genome Project (BDGP).

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophina Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophina melanogaster genome using these BACs. For further information picase sec http://www.fruitfly.org The BDGP Drosophina melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AV629284 AV529284 Chlamydomonas reinhardtii 5% to 0.04% CO2 Chlamydomonas reinhardtii 5% to mRNA sequence.

California, Riverside. The cDNA clones were in vivo
cxtised to give pBluescript phagemids before
normalization was carried out. The mass excision of
phagemid library and normalization were done in HI Nguyen
lab by D. Zhang at Texas Tech University. Normalization
protectol used was that of Soares. Plasmid DNA
preparations and DNA sequencing were performed in the OD
Anderson lab (al) other authors)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5H709682 10-FEB-2002 DNA linear GSS 20-FEB-2002 BOMELO7IF BO_2_3_KB Brassica oleracea genemic clone BOMELO7, DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241 KVDLIKNWQLSWPRMENAENIMSIGSARPLEDATRIAYROLIYWLVEDFGFEOWDAYMLL 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 FEGAINSEQDIPSQLLKMPFLNPQNGPIMVNGAEKGDVLAVYIESMLPRGVDPYGICAM1 120
                                                                                                                                                                                                                            This sequence represents a R-specific amidohydrolase isolated from Klebsiella oxytoca strain PRS1 which allows the microorganism to utilise 3,3,3-trifluoro-2-hydroxy-2-methy, propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               233 TEGPVTQHLEKHGYSAFTGIGPDLMTAARDAVSYTIDALCKEQGMSAEFAYMLGSVGGDL 292
                                                                                                                                                               The invention relates to a novel amidase, and the gene encoding the novel amidase, from interobacter cloacae. The novel amidase stereoselectively hydrolyses alpha-amino acid amides and alpha-hydroxy acid amides to give optically active alpha-amino acids and alpha-hydroxy acids. The invention also relates to variants of the novel amidase which retain activity, recombinant vectors and host cells containing the novel amidase gene, and recombinant production of the novel amidase gene have remarkably elevated catalytic capability as compared to those produced by conventional methods. The present sequence represents the novel Enterobacter cloacae amidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                 Novel amidase gene encoding protei: which stereoselectively hydrolyzes alpha-amino-acid amides and alpha-hydroxy-acid amides, with enhanced catalytic capability to yield optically active alpha-amino-acids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAGCILMLPVEVEGALFSIGDTHAAQGDGEVCGTAISSAMOVVVKLEVVKDMPLKTPRFA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         â
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the genome sequence of distorial monocytogenes EGP-e (see ABA03041). The genome sequence and fragments of the are useful for selecting probes and primers for detecting genes is L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and its biosynthesis and biodegradation, especially biosynthesis of vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

Specification, but was obtained in electronic format directly from WIPO at the printed and the contraction of an electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64 IYIBERARRODLLAITIEKIRLLGTEVFELNG--PN:-GITDBLLIS------NSTROYK 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23 QODQPLHNRWHPEIPPVAEVKAGEFFRVEMIDAMGGVIKDNDSASDIKN--LVLITIHHL 77
